JOHNI-BOLT® & JOHNI QUICK BOLT® Closet Bolts

Date: August 2017

Johni-Bolt

The original patented, solid brass closet bolt - with time saving snap-off slot and captive washer. A pair of pliers easily snaps off the top of the bolt. Captive washer keeps bolt upright and prevents it from falling through the flange. Oversized solid brass acorn nuts, stainless steel washers. Packaged in pairs (two bolts with captive washer, two washers, two brass acorn nuts per plastic bag). Specially designed head fits into every flange and slides easily into position. Won't rust or corrode. Nuts will not strip or round out easily. The **Johni-Bolt XL** is extra-long to accommodate those remodeling projects where multiple floor surfaces require a longer bolt to secure the water closet to the existing flange. Because of the wide variance in required length, XL bolts do not have break-off notches, but may easily be sawed flush as needed.

Johni Quick Bolt

The **Johni Quick Bolt** is a unique bolting system for mounting toilets. Eliminates wobbly bolts and the need for double-nutting, flimsy wax, putty, or thin plastic washers. Fast; easy; and secure. Just push down on the gold-colored plastic washer (no need to "screw on"), and then turn to tighten.

APPROVALS & LISTINGS

Many plumbing codes require use of solid brass bolts.

SPECIFIC USES

Johni-Bolts are used to secure water closets to flanges.

SPECIFIC APPLICATIONS*

Johni-Bolts are designed to be used with a wax ring to provide leak-proof perimeter around water closet base. **Johni-Bolts** can be used on new installations or replacement of existing water closets.
